

Branch Manual

Receiving and sending stock, managing your team, and reading your numbers.

Who this is for	Branch managers and assistant managers.
What it covers	The Branch area. Cashiers have their own manual for the till.

Running your store

You sign in to the Branch area. The sidebar is grouped into Overview, Operations, Insights and Team — this manual follows the same order.

Group	What lives there
Overview	Command Center, Dashboard, Analytics, Reports
Operations	Stock, Ordering Cycle, Transfers, Receiving, Sending Out, Disputes, Transfer Receipts, Reservations, Quarantine, BIR Registration
Insights	Sell-Through, Inventory Aging, Cross-Sell, Demand, Alerts
Team	Champions, Fashion Assistants, Cashiers, POS Terminals

A normal day

1. **Morning:** open the **Command Center** for the day's summary, and check **Alerts** for anything running low.
2. **Through the day:** the **Time Report** shows where sales stand right now against the same weekday last week.
3. **When stock arrives:** go to **Receiving** and scan it in.
4. **When stock leaves:** go to **Sending Out** and pack, load and dispatch it.
5. **End of day:** make sure cashiers have closed their shifts and the cash has been reconciled.

Receiving stock

Everything that comes in is counted by scanning. There is no box to type a quantity into: what you receive is the number of pieces you scan.

Deliveries in boxes

1. Open **Receiving** and scan the box code on the carton.
2. The screen lists what is inside and how many of each.
3. Scan every piece as you take it out. The counts update as you go.
4. **Finish box** when the box is empty.

While you scan, the screen keeps four counts:

Count	Meaning
Matched	Pieces scanned that belong in this box.
Still missing	What the box should hold that you have not found yet. The list below shows exactly which items and how many.
Extra	More of an item than was packed — usually a double scan.
Wrong item	Something scanned that is not in this box. The screen names which box it belongs in, so you can set it aside for that one.

- Mis-scanned something? **Undo last scan** takes it back. It can only lower a count, never raise one.
- A box that never arrived: **Box missing**. Nothing is received and the whole box is reported. Only available before you scan anything from it.
- Any difference between what was packed and what you scanned goes to **Disputes** automatically — you do not have to raise it yourself.

Loose deliveries

Same idea without the boxes: open the transfer, scan every piece, then **Complete Receiving**. If nothing arrived at all, use **Nothing arrived** so the delivery can be closed and recorded.

Your scan is what goes into stock

Stock is credited from what you actually scanned, not from what the paperwork said. If a box is short, scan what is really there and finish it — the shortage is recorded against the sender, and your shelf count stays honest.

Sending stock out

Returns to the warehouse and transfers to another branch both start in **Transfers** and are then moved in **Sending Out**.

Raising it

- **Request** — ask the warehouse to send you stock.
- **Return** — send stock back to the warehouse. A reason is required.
- **Send** — move stock to another branch.

The moment you raise it, the stock leaves your sellable count and is held in reserve. It is not lost — it comes straight back if the transfer is cancelled or if you pack less than you asked for.

Sending it

1. Open **Sending Out**. It lists what is leaving your branch and what the next step is.
 2. **Pack:** scan each piece as it goes in. You cannot scan more than was requested. Anything you do not pack goes back on your shelf.
 3. **Load out:** scan each box onto the vehicle (or confirm the load for loose pieces), and name who is taking it.
 4. **Dispatch:** send it on its way, with a courier and tracking number if you are using one.
- If the stock turns out not to be on the shelf, use **Nothing can be sent**. The transfer closes and everything it was holding returns to you.
 - Nothing is dispatched until it has been loaded out, so there is always a record of what physically went and who took it.

Your team

Fashion assistants

Your floor staff, and who sales get credited to at the till.

1. Open **Fashion Assistants** and press **Add**.
 2. Enter their name, and an employee code if you use one.
 3. It is sent to head office. The row shows **Waiting for HQ**.
 4. Once approved, they appear in the till's dropdown and can be credited with sales.
- A rejected one shows the reason underneath, so you know what to fix.
 - When someone leaves, **deactivate** them rather than deleting. Their past sales stay credited to them.
 - The same page shows performance per assistant over a date range.

Approve at least one before the tills need it

Until head office approves somebody, your cashiers have to ring every sale as 'No associate'. Add your floor staff early so approvals are done before a busy day.

Cashiers and terminals

- **Cashiers** — the people who can open a till at your branch.
- **POS Terminals** — each register is enrolled with a code you type on the register itself. The code works once.

Champions

Your top performers over the last 30 days.

Stock and ordering

Branch Stock

What you hold, by product. Use it to check a count before you tell anyone the shelf is wrong.

Ordering Cycle

How often your store orders and how long stock takes to arrive. Together these decide how much cover each order is sized for, so keep them honest.

Quarantine

Defective or damaged items held aside at your branch, so they are not sold by mistake.

Reservations

Customer pickup reservations held at your branch.

Demand Log

Record customers asking for things you did not have. This is the only record of a sale you could not make, and it feeds buying decisions — worth the ten seconds.

Disputes and Transfer Receipts

- **Disputes** — differences raised when a delivery did not match. Settle one with a cause and a note once it is resolved.
- **Transfer Receipts** — the paperwork for stock moved between your branch and the warehouse.

BIR Registration

Your branch's BIR and POS registration details as they print on receipts. Changes need head office approval before they take effect.

Knowing how you are doing

Page	What it answers
Command Center	What needs attention this morning.
Dashboard	How the store is performing day to day.
Time Report	Where sales stand right now, against the same weekday last week. It sits at the top of the Dashboard and Reports.
Reports	Sales over a period, and what your promotions contributed.
Sell-Through	How quickly stock is selling.
Inventory Aging	How old your stock is. Green is 0-90 days, yellow 91-180, red beyond that.
Cross-Sell	How often staff add the suggested extra item.
Alerts	Items running low.
