

RDI — RETAIL OPERATIONS

Super Admin Manual

Approvals, pricing, promotions, the stock chain and the numbers behind them.

Who this is for	Admin accounts — head office.
What it covers	The whole system. Branch and cashier staff have their own manuals.

The whole business

Admin is the only role that sees every branch and every setting. The sidebar is grouped into five sections, and this manual follows them.

Section	What lives there
Administration	Users, Branches, Branch Goals, Catalog, Inventory, Prices, Settings
Overview	Dashboard, Reports, Analytics
Operations	Transfers, Ordering Sign-off, Disputes, Couriers, BIR Approvals, Audit Log
Marketing	Promotions, Fashion Assistants
Insights	Sell-Through, Inventory Aging, Fulfillment Speed, Cross-Sell, Trading Calendar, Size Curves

Who sees what

Roles decide where a person lands when they sign in and what they can reach.

Role	Lands on	Can reach
admin	Users	Everything
hqStaff	Warehouse	Warehouse, POS
manager	Branch Dashboard	Their own branch, POS
cashier	POS	POS only
warehouseStaff	Warehouse Suppliers	Warehouse, POS
viewer	Branch Dashboard	Their own branch, read-only
driver	Deliveries	The driver app
supplier	Supplier Portal	The supplier portal

Approvals only you can give

These are the decisions the system deliberately keeps with head office.

Approval	Where	Why it sits with you
Fashion assistants	Marketing	An attributed sale is an incentive paid. A branch adding its own names unchecked is a store paying itself.
Transfer requests	Operations	Stock leaving the warehouse.
Ordering sign-off	Operations	Order lines above the threshold.
BIR registration	Operations	Changes print on legal receipts.
Branch goals	Administration	What each store is measured against.
Prices	Administration	What every branch sells at.
Promotion limits	Settings	How much promotions may give away.

Marketing

Fashion Assistants

Branches add their own floor staff; you decide who may be credited with a sale. The page opens on **Waiting**.

1. Review the queue: name, branch, who added them and when.
 2. **Approve** — they are issued a UID (FA-0001, FA-0002) and appear in that branch's till dropdown.
 3. **Reject** — give a reason. The branch sees it on their own list.
- UIDs are company-wide and never reused, so two branches can never clash and a number is never handed to a second person.
 - Until someone is approved, that branch's tills must ring sales as **No associate**.

Promotions

Every kind of offer the tills can apply.

Type	What it does
Percentage / Fixed Amount	A straight discount, optionally needing a minimum quantity.
Buy X Get Y	Free pieces per completed group.
Tiered	Spend a minimum for an amount off, or the cheapest item free.
Cross-Sell	Buying one thing discounts another.
Purchase with Purchase	A reward item at a special price.
Gift with Purchase	Spend a minimum and one item is free, up to a value cap. A dearer gift is allowed — the customer pays the difference.

Stacking

- **Settings to Promotion Limits** sets how many promotions one sale may carry and the most they may take off together. The defaults are one promotion and no cap, so nothing stacks until you raise them.
- A promotion marked **Can't be combined** always runs alone.
- When the cap bites, the total is trimmed proportionally and the receipt still lists each promotion separately.

Check the scope before you switch one on

A promotion named for polos but scoped to a whole brand will discount everything in that brand. The form states in plain words what it applies to — read that line before activating.

Catalog, stock and prices

Catalog

Products are held as **brand to category to style to variant**. A style is the product; a variant is one size and colour of it, with its own SKU.

- Click a product name to open its variants.
- **Generate Variants** builds every size and colour at once and spells the SKUs for you, rather than adding them one at a time.
- Style codes may repeat; SKUs are unique.

Prices

Every product has a **Base SRP**. A branch sells at that price until it is given its own.

- Set one branch, or many at once.
- Pricing below the base price is allowed but asks you to confirm, so it is always a decision rather than a slip.

Inventory

Stock across the chain, following supplier to warehouse to branches.

Branch Goals

- A **standing goal** applies every month; a **month goal** overrides it for one month, for seasonality.
- **Trajectory** at the top shows the year's goal, what has been taken, what is expected by today and where the year lands at this pace.
- Expected-by-today adds up each month's own goal rather than dividing the year by twelve, so a store carrying a heavy December is not judged in March as though every month were the same.

Operations

Transfers and the stock chain

Stock moves in one chain, and every handover is recorded:

Stage	Who	What happens
Request	Branch or HQ	Stock is held at the source immediately.
Approve	You, or the receiving branch for inter-branch	Cleared to pack.
Pack	Where the goods are	Each piece scanned. Unpacked stock returns to the shelf.
Load out	Where the goods are	Boxes scanned onto the vehicle; who took them is named.
Dispatch	Same	Driver, courier or neither.
Receive	Destination branch	Each piece scanned. Differences go to Disputes.

- Stock leaves the source's sellable count the moment a transfer is **requested**, not when it ships. It sits in reserve until received.
- Counts are scanned at both ends. Nothing in the chain takes a typed quantity.
- **Fulfillment Speed** breaks the pipeline into stages so you can see where it slows.

Disputes

Raised automatically when a delivery did not match. Settling one records the cause and a note; it does not move stock, so correct any count on the branch itself.

Couriers and BIR Approvals

- **Couriers** — the third-party providers available when dispatching.
- **BIR Approvals** — branch registration changes. Approved values go live on that branch's receipts, so check them carefully.

Audit Log

Every significant action, with who did it. This is where to look when a number is not what someone expected.

Reading the business

Page	What it answers
Dashboard	How the business is doing today, with the Time Report at the top.
Time Report	Where sales stand right now, against the same weekday last week at the same hour. Open it for thirty days of history.
Reports	Sales for a period, by branch and channel.
Promotion Contributions	Per promotion: items sold, sales, items given away and what those giveaways were worth.
Analytics	Deeper analysis across the business.
Sell-Through	Which branches move stock fastest.
Inventory Aging	How old stock is. Green 0-90 days, yellow 91-180, red beyond.
Cross-Sell	How often cashiers take the suggested add-on.
Trading Calendar	Promotions across the month.
Size Curves	Size imbalances worth correcting.

Setting up a new branch

In this order, because each step depends on the one before.

1. **Branches** — create the store and set its channel and region.
2. **Users** — create the manager and cashiers, assigned to that branch.
3. **Branch Goals** — give it a standing monthly goal.
4. **Prices** — set branch prices if it is not selling at Base SRP.
5. **BIR Approvals** — approve its registration details so receipts are correct before the first sale.
6. **POS Terminals** — the branch enrolls each register with a one-time code.
7. **Fashion Assistants** — the branch adds its floor staff; you approve them so tills can credit sales.
8. **Stock** — send an opening transfer from the warehouse.

Two things to settle before the first day

Approve at least one fashion assistant per branch, or every sale has to be rung as 'No associate'. And make sure products carry scannable labels: receiving, packing and the till all count by scanning, and a printed SKU label works if manufacturer barcodes have not been loaded.
